Skills & Certifications

- **Certifications:**
 - GitHub: Career Essentials in GitHub Professional Certificate
 - Certiport: IT Specialist - Software Development
 - Docker Foundations Professional Certificate
 - IBM: Web Development Fundamentals
 - IBM: User Experience Design Fundamentals
 - N.O.C.T.I. Management Certified
- **Applications:**
 - Linux Operating Systems & Terminals
 - Microsoft Suite (i.e., Excel, Access)
 - Qt Development Framework
 - Autodesk Fusion 360
 - WordPress
 - Docker
 - KiCad
 - Unity
 - Git
- **Programming Languages:**
 - C#
 - Java
 - Python
 - Lua
 - SQL
 - LaTeX
 - HTML, CSS, & JavaScript
- **Communication Skills:**
 - Basic understanding of Spanish
 - Limited proficiency in Tamil
 - Limited proficiency in Telugu

Experience

- **Student Assistant** – *UGA Dining Services (August 2026 – Present)*: Collaborated with team members to efficiently prepare and serve meals in a fast-paced, high-volume dining environment, monitoring prepared food and ingredient supplies to ensure adequate stock levels throughout shifts.
- **Code Coach** – *theCoderSchool (May 2026 – August 2026)*: Led weekly summer camps introducing students to programming through block-based and text-based Python, focusing on its applications in hardware control. Additionally, I managed the preparation, slicing, and 3D printing of student CAD designs.
- **Web Developer** – *Uplift Academy (Mar 2025 – July 2025)*: Led development of a responsive website for a nonprofit tutoring association, collaborating through GitHub to integrate a custom back-end learning management system and implement custom front-end features using JavaScript libraries.
- **Web Developer** – *Swachh Devalaya (Jan 2025 – May 2025)*: Developed and managed a WordPress website for a local temple initiative, organizing and updating the site layout with new content, and later providing training for independent site management.

Projects

- **Astrapad**: A 7 key macropad powered by a Seeed Xiao RP2040, my first hardware project. I custom designed the PCB in KiCad using opensource component schematics, manually wired the traces, and designed the 3D-printed case in Autodesk Fusion 360. I also wrote the KMK firmware it runs on, which allows the microcontroller to control the 16 WS2812B LEDs, 7 keys, rotary encoder, and 128x32 OLED display the macropad is outfitted with.
- **Post-Impact**: Debut entry for Denmark High School in the Emory SPARC competition, placing top 5 in the state. I led development of the backend infrastructure that tied all the minigames together, including designing and building the central lobby where players select a minigame on boot, and a scene-switching system that managed the reassignment and handoff of physical player controls across four minigames. I also led the final merging and packaging process, managing a GitHub repository where breakout teams uploaded their minigames and using Unity to combine them into a single cohesive game.

Honors & Awards

- **CTAE Medallion** – *Forsyth County Schools (2026)*
- **AP Scholar with Distinction** – *College Board (2025, 2026)*
- **NLC Qualifier for Computer Applications** – *FBLA (2025)*: Efficiently and accurately completed advanced tasks across Microsoft Office Applications (Ex: Access, Excel)
- **National School Recognition Award** – *College Board (2025)*
- **National Cyber Scholarship Finalist** – *CyberStart America (2024)*: Solved advanced cybersecurity challenges involving website network traffic analysis and virtual machine systems to extract information.

Extracurriculars

- **Emory S.P.A.R.C. V.R. Competition** **2025 – May 2026**
 - Developed a V.R. game in Unity, collaborating over GitHub
 - Led Lobby and backend function development (such as scene switching scripts)
 - Placed top 5 in the state
- **FBLA, Alpharetta, GA** **2024 – May 2026**
 - Competed in regional & state competitions
 - Participated in school wide donation drives & volunteering schemes
 - Qualified for the 2024 National Leadership Conference
